

# Hybrid Cloud Management

## Ensure a Disruption Free Business with Microland's Hybrid Cloud Management Services

Contrary to popular perception, cloud infrastructure requires continuous and efficient management beyond the initial set up. For hybrid cloud management, a key requirement is federation of data and resources between internal and third-party datacenters with zero disruption to business. To maximize the value of the hybrid IT environment, the cloud platform, orchestration layers, accounts, costs, and DevOps,

must all be managed efficiently. Enabling the adequate governance and control to ensure seamless delivery in a multi-source IT operating model is yet another challenge while providing hybrid cloud services. Managing such environments requires resources with deep understanding of cloud design and build, and specialized skills in automation and public cloud management

### HOW WE HELP

Microland uses its global experience and focused expertise in designing, building, and managing multiple hosted traditional, private and public cloud environments to

provide Hybrid IT Management Services. Figure 1 describes how we enable critical success factors for hybrid IT using managed services
